Revolutionary TEMPERATURE MONITORING

Introducing the WiDAQ™ wireless communication system

Refrigeration Innovation has spent the last 3 years developing and refining a wireless communication system that not only works, but is actually more reliable for remote temperature monitoring and control than any analog system.

WiDAQ: INDUSTRY FIRSTS

Wireless that works™

- Virtually any linear sensor can be connected to the WiDAQ for wireless communication and interface; Pressure, Humidity, Current, and Combination Pressure and Temperature Sensors (coming soon)
- Complete pre-commissioning available for simple plug and play field installation
- Does not use batteries or require line of sight and can operate as far as 1000' away from the nearest device (normal range between 350'-800' non line of sight)
- Completely digital for unrivaled reliability and accuracy
- EZView wireless alarm artwork, can be mounted anywhere on site, or up to 20 miles away with the Xtend option.

FOOD SAFETY

Food Safety is becoming the top concern of grocery shoppers globally. Government standards will be introduced increasingly over the next 2-4 years following the European implementation of higher standards.

RI PRODUCTS

The Thermo-Simple product line offers many options for Food Safety in every refrigerated case and cooler.

Thermo-Simple 1
Rectangular replacement for the solar digital thermometer. Part # TS1

Thermo-Simple 2
Direct replacement for the 2" dial thermometer. Part # TS2 (variations include -BOX and -CUST)

Thermo-Simple 3 -- Coming Soon!
Direct replacement for the solar digital thermometer with TS2 functionality

QST (Quad Sensor Tap)
A sensor only option for use with the WiDAQ wireless system can connect up to 4 digital temperature sensors. Part # QST -X(X= number of sensors)

EZView wireless alarm artwork
Call for more information

AST (Analog Sensor Tap)
Enables virtually any analog sensor with linear output to be used with the WiDAQ wireless system - *Coming Soon!*

WiDAQ
Includes all hardware required for wireless communication and interface to EMS or BAS system, Call for more information

24 Monitoring, remote troubleshooting and dispatch - *Coming Soon!*

Installation and remote or onsite support available

Visual indicators are common, but are not equal. One glance down an aisle with Thermo-Simple devices will dispel any preconception that all thermometers are created equal. It is simple, unmistakable and absolutely accurate. Personnel will quickly learn to "trust" the Thermo-Simple devices and product loss will be significantly reduced or eliminated.

Many retailers are worried about using visual indicators in cases where customers can see them. There are also many who believe personnel are the last people who should be relied upon for identifying problems. Both of these ideas are valid with the old methods of temperature monitoring. The reality is personnel have never had a simple tool that they can rely on to alert of a real problem. And as for the notion that placing visual alerts on cases is going to have a negative impact on business, it is proven that business has increased where the Thermo-Simple devices are implemented and margins have increased as well.

The devices can be customized for virtually any color and alarm parameters based upon your needs. Try it without a visual alert for 60 days while using an EZView floorplan and EMS interface. After 60 days implement a visual alert on the cases and compare, keeping a close eye on your business. I am sure you will see nothing but positive impact, and more than likely a few shoppers will take notice and thank you.

Eventually grocers who implement WiDAQ, EZView and Thermo-Simple with visual alerts will virtually eliminate loss and can actually advertise the incredible steps taken to educate shoppers who will come to expect these measures and honor those who have taken them with their loyalty.
